

**TECHNOLOGIES OF THE FUTURE
(ТЕХНОЛОГИИ БУДУЩЕГО)**

Орлов М. – здобувач вищої освіти групи М1/1

Науковий керівник – Жанна Ігнатенко, викладач кафедри іноземних мов МНАУ

У цьому творі розглянуті майбутні технології, що у процесі виходу для повсякденного користування. У тексті є дві частини. У першій обговорюються плюси та мінуси прогресу у сфері технологій, а у другій про геніальну особистість, яка виводить планету Земля на новий рівень.

Ключові слова: технології, Ілон Маск, прогрес, винахід

This work discusses future technologies that are in the process of being released for everyday use. The article has two parts. The first one discusses the pros and cons of progress in the field of technology, and the second one is about a brilliant person who takes the planet Earth to a new level.

Key words: technology, Elon Musk, progress, invention

Everyone is interested in what will happen to the world in 50 years. People before could not even imagine what it was like to have a connection with a person who is a thousandth away from you, to have the Internet where there is all the information from all over the world about something happening.

First you have to draw a line under the real person. He is intelligent and capable of developing unthinkable special technologies. He absolutely depends on special technologies and cannot imagine life without them. The Internet controls everything today, all databases are online, which is convenient, but also very risky. What can we expect in the future? The invention of new technologies will continue, the man of the future will simplify his life as much as possible, physical labor will be reduced to a minimum, because only with the support of sports can you take care of your health. At the same time, the number of people who will take care of their bodies will increase significantly.

The man of the future will undoubtedly study space. Soon people will live on other planets and create colonies, but this will not change the fact that man will continue to have a consumer attitude towards life.

With the development of technology, we begin to notice how the world around us responds and begins to change along with this development.

One of the most interesting people on this planet is Elon Reeve Musk. If I had the opportunity to talk to any person of the last century, I would tell him exactly about him. Elon Musk is a brilliant personality, the best engineer, and entrepreneur for the last 100 years for sure. Elon's childhood was not easy, he was often beaten at school, bullied, which is why he became a self-contained person. After the divorce of his parents, he and his brother decided to live with the father of an engineer, where he helped his father hard and worked at a construction site.

At the age of 10, the boy received a computer on which he learned to program and create his first games. Elon became so interested in this topic that he began to create his own companies little by little.

In May 2002, Musk founded his third company, SpaceX. It is a private developer of a series of launch vehicles and a commercial operator of space systems. Initially, he wanted to reduce the cost of flying into space by 10 times by investing \$ 100 million in the company from his past projects. Elon also wanted to prove to all mankind that it is adequate to fly rockets and spaceships to anywhere on the Earth, after which he proved this in his Instagram account.

In this article, the question may arise, what did Elon Musk do for Ukraine itself? In such a difficult time for the country, he helps us in every possible way, for example: he launched his satellites in most regions so that people always have Internet. You just need to download the program, look at the sky and the Internet is at your disposal.

In fact, a lot of things can be written about this brilliant man, because he is trying in every way to pull the planet to a new level of technology. A lot can be written about his plans, but these plans are also supported by evidence.

Why did I decide to write such an article about this person? The answer is obvious - no one is progressing as much as his company. Take the same "Tesla" cars that run on electric and do not harm the environment, in addition to which they are one of the safest cars in the world. Take the same company "Space X" which, in the event of a global catastrophe, can deport people to Mars.

Why did I write this article? So that people can see how progress in the field of technology does not stand still, but every day it only moves forward. So that the younger generation would strive to study this and improve it in the future.

What conclusion can be drawn from this article? Progress! Improve! Take action! Each of us can become the same Elon in our field and promote it as long as it is possible for you to do so.
