Краткое описание

Analysis of the existing models of knowledge representation in informational systems allowed to make a conclusion about considerable advantages of combined network models, which are able to take into account indistinct content of some information. That's why the semantic network that differs from the well-known ones by the peculiarities stated in this article is accepted as a mathematical model of informational resource of a distance learning system. © 2019, Springer Nature Switzerland AG.

Ключевые слова автора

Fuzzy logic; Information technology; Informational resource; Predicate; Semantic network

Включенные в указатель ключевые слова

Контролируемые термины инженерии

Distance education; Information analysis; Information technology; Knowledge representation; Learning systems; Semantics

Неконтролируемые термины инженерии

Informational resource; Informational system; Network models; Predicate; Semantic network

Основной заголовок инженерии

Fuzzy logic
