But tomatoes are not unchanged, and many new varieties have recently appeared on the market to meet the different needs of consumers.

Tomatoes are one of the most popular vegetables in the world. One of the most common types of tomatoes are bush tomatoes. They are small in height, reaching 30-50 cm, and are often grown in containers on balconies and window sills. Their fruits are small, up to 5 cm in diameter, but their taste and aroma are very pleasant. Another common type of tomato is the grape tomato. These tomatoes are oblong in shape and look like a bunch of grapes. They are often used to decorate dishes, but also have a great taste and flavor. Hybrid tomatoes are the result of crossing different varieties. They have higher yields and properties that provide better resistance to diseases and pests. One of the most popular hybrids is the Phoenix, which has large, fleshy fruits and disease resistance.

When choosing a tomato variety, you should pay attention to its characteristics and recommendations for growing. One of the most famous new tomato varieties is the Red Baron. This variety has a bright red color, large size and high yield. Due to its dense structure, 'Red Baron' tomatoes are excellent for making sauces, salads, and other dishes. Another

Another interesting new tomato variety is the Black Prince. This variety has a dark brown color and fleshy texture. Black Prince tomatoes have a richer flavor than traditional red tomatoes and are great for cooking with meat and fish.

In addition, tomato hybrids have become popular in recent years, which have unique properties. For example, the hybrid "Plum" has a long shape and sweet taste. This hybrid is excellent for making preserves and jams. Also among the new tomato species are hybrid tomatoes. These tomatoes are obtained by crossing different types of tomatoes. They have characteristics of both species, which makes them unique and interesting for consumers. Regardless of what type of tomato you grow, it is important to remember that each variety has its own climate and care requirements.
