The Impact of the War in Ukraine on the Study Results at an Agricultural University

Iлона Batsurovska and Viacheslav Kurepin

Introduction

- 1 The ongoing conflict in Ukraine has had a significant impact on many aspects of life, including education. Agricultural universities in Ukraine have not been immune to this impact, and students studying at these institutions have faced a range of challenges related to the conflict. The war has disrupted normal academic activities, including research projects, practical training, and internships, and has forced many students and faculty members to relocate or leave the country altogether.
- 2 Additionally, the conflict has highlighted the importance of sustainable development, resilience, and community engagement in the agricultural sector, and has created a need for agricultural universities to adapt their educational programs and research agendas to address these new challenges.
- 3 In this context, **the purpose of the article** is to explore the impact of the war in Ukraine on the results of studies at an agricultural university, and to identify strategies for promoting sustainable development and resilience in conflict-affected areas.
- 4 The war in Ukraine can have various impacts on studying at an agricultural university, depending on the location of the university and the extent of the conflict in the region. Here are some possible ways in which the war in Ukraine may affect students studying at an agricultural university:
 - Disruption of academic activities: If the university is located in an area that is directly affected by the conflict, academic activities may be disrupted due to safety concerns, destruction of infrastructure, or displacement of students and faculty. This can result in delays in completing coursework, research projects, and other academic requirements.

- **Decreased enrollment:** The war in Ukraine may discourage potential students from enrolling in an agricultural university located in the conflict-affected region. This can result in a smaller student body and fewer resources for the university.
- **Financial strain:** The war in Ukraine may lead to economic instability and financial strain for the university, which may affect funding for research, infrastructure, and student support services.
- **Opportunities for practical learning:** Agricultural universities may provide opportunities for students to gain practical experience through internships, fieldwork, and other hands-on activities. However, the war in Ukraine may limit these opportunities due to safety concerns or disruption of agricultural activities in the region.

Results

- 5 **The ways that impact studying at an agricultural university.** The war in Ukraine may affect the ability of researchers at the university to access resources, collaborate with other institutions, or conduct fieldwork in conflict-affected areas. This can impact the quality and relevance of research output from the university (Batsurovska & Dotsenko, 2022).
- 6 Overall, the impact of the war in Ukraine on studying at an agricultural university will depend on the specific circumstances of the university and the conflict in the region. It is important for universities to take proactive measures to mitigate the effects of the conflict and support students and faculty in these challenging times (Kunytytska-Iliash, 2023), (Lupenko et al., 2022), (Pysar et al., 2020), (Samarets & Nuzhna, 2019).
- 7 Here are some additional ways in which the war in Ukraine can impact studying at an agricultural university:
- 8 **Displacement of students:** The conflict may result in the displacement of students from their homes, which can affect their ability to attend classes and complete academic requirements. Additionally, students may face psychological distress due to the trauma of the conflict, which can impact their academic performance.
- 9 **Availability of resources:** The war in Ukraine may disrupt the transportation and distribution of resources needed for agricultural activities, such as seeds, fertilizers, and equipment. This can impact the ability of the university to provide practical learning opportunities and may limit the research opportunities available to students and faculty.
- 10 **Changes in agricultural practices:** The war in Ukraine may lead to changes in agricultural practices, such as the use of different crops or the adoption of new technologies, to adapt to the changing conditions. Agricultural universities may need to modify their curricula to reflect these changes and prepare students for the evolving needs of the agricultural sector.
- 11 **Agricultural universities may collaborate with institutions in other countries to exchange knowledge, resources, and expertise.** However, the war in Ukraine may limit the ability of the university to participate in such collaborations due to travel restrictions or safety concerns.
- 12 **Impact on job prospects:** The war in Ukraine may affect the job prospects of students graduating from an agricultural university, particularly if the agricultural sector in the

region is disrupted or the economy is negatively impacted. Graduates may need to adapt to new job opportunities or seek employment in other regions.

- 13 In summary, the war in Ukraine can have far-reaching impacts on studying at an agricultural university, ranging from academic disruptions to changes in agricultural practices and job prospects. It is important for universities to be aware of these impacts and take measures to support students and faculty during these challenging times.
- 14 Impact on the availability of funding: The war in Ukraine may also impact the availability of funding for agricultural universities, particularly if the conflict results in a recession or economic downturn. This may limit the resources available for research, infrastructure, and student support services.
- 15 Access to markets: The war in Ukraine may disrupt trade and limit access to markets for agricultural products. This can impact the viability of agricultural enterprises and the ability of graduates to find employment in the agricultural sector.
- 16 Role of agriculture in conflict resolution: Agricultural universities may play a role in conflict resolution by promoting sustainable agriculture practices, supporting the development of local food systems, and providing economic opportunities for communities affected by the conflict. This can provide a unique opportunity for students to learn about the intersection of agriculture and conflict resolution.
- 17 Importance of agricultural education in post-conflict recovery: Agricultural universities can play an important role in post-conflict recovery by providing education and training opportunities for individuals seeking to rebuild their lives and communities. Agricultural skills and knowledge can provide a pathway to economic stability and food security in the aftermath of conflict.
- 18 Role of technology: Agricultural universities may also explore the use of technology to support agricultural activities in conflict-affected areas, such as remote sensing, precision agriculture, and data analytics. This can provide opportunities for students to learn about emerging technologies and their potential applications in the agricultural sector.
- 19 In conclusion, the war in Ukraine can have significant impacts on studying at an agricultural university, ranging from academic disruptions to changes in agricultural practices and job prospects. However, it is also important to recognize the unique opportunities for agricultural universities to play a role in conflict resolution and post-conflict recovery, and to explore the potential of emerging technologies to support the agricultural sector in the region.
- 20 Importance of sustainable agriculture: The war in Ukraine may highlight the importance of sustainable agriculture practices, as conflict and displacement can lead to environmental degradation and loss of agricultural productivity. Agricultural universities may provide education and training on sustainable agriculture practices, such as conservation agriculture, agroforestry, and soil conservation, which can help to restore and maintain the productivity of the land.
- 21 Need for food security: The war in Ukraine may also highlight the need for food security, particularly in conflict-affected areas where access to food may be limited. Agricultural universities may provide education and training on food security, including strategies to improve access to nutritious food, reduce food waste, and increase local food production.

- 22 Role of agriculture in community development: Agricultural universities may also play a role in community development by supporting local agricultural enterprises and promoting entrepreneurship. This can provide economic opportunities for individuals and communities affected by the conflict and contribute to the long-term recovery of the region.
- 23 **The international collaborations between agricultural universities.** The war in Ukraine may impact international collaborations between agricultural universities, particularly if the conflict leads to tensions with other countries or limits the ability of universities to travel and exchange knowledge and expertise.
- 24 The war in Ukraine may highlight the importance of interdisciplinary approaches to agricultural education and research, as agriculture intersects with many other fields, such as economics, environmental science, and conflict studies. Agricultural universities may need to collaborate with other institutions and disciplines to address the complex challenges posed by the conflict and to develop sustainable solutions for the agricultural sector.
- 25 In conclusion, the war in Ukraine can have far-reaching impacts on studying at an agricultural university, highlighting the importance of sustainable agriculture, food security, community development, interdisciplinary approaches, and the role of technology. Despite the challenges posed by the conflict, agricultural universities can provide unique opportunities for students to learn about the intersection of agriculture and conflict, and to contribute to the recovery of the region through their education and research.
- 26 The war in Ukraine may also highlight the importance of disaster preparedness in the agricultural sector, as conflict and displacement can increase the risk of natural disasters such as floods, droughts, and wildfires. Agricultural universities may provide education and training on disaster preparedness, including strategies for mitigating the impacts of natural disasters on agricultural production.
- 27 The war in Ukraine may also highlight the importance of cultural sensitivity in agricultural education and research, particularly in conflict-affected areas where tensions may exist between different ethnic and cultural groups. Agricultural universities may need to work to ensure that their education and research are inclusive and culturally sensitive, and that they respect the diverse perspectives and experiences of all stakeholders.
- 28 The war in Ukraine may also impact the mental health and well-being of students and faculty, particularly if they have been directly affected by the conflict or if they are working in a high-stress environment. Agricultural universities may need to provide mental health support services and resources to support the well-being of their students and faculty.
- 29 The war in Ukraine may highlight the need for political stability in the agricultural sector, as instability and uncertainty can create challenges for farmers and agribusinesses. Agricultural universities may need to work with policymakers and other stakeholders to advocate for policies that support the agricultural sector and promote political stability.
- 30 The war in Ukraine may also highlight the role of international aid in supporting the agricultural sector, particularly in conflict-affected areas where access to resources may be limited. Agricultural universities may need to work with international aid

organizations to coordinate their efforts and to ensure that aid is delivered in a way that supports long-term sustainability and community development.

- 31 In summary, the war in Ukraine can have significant impacts on studying at an agricultural university, highlighting the importance of disaster preparedness, cultural sensitivity, mental health support, political stability, and international aid. Despite these challenges, agricultural universities can provide unique opportunities for students to learn about the intersection of agriculture and conflict, and to contribute to the recovery of the region through their education and research.
- 32 The war in Ukraine may also highlight the role of technology in the agricultural sector, particularly in conflict-affected areas where access to resources and infrastructure may be limited. Agricultural universities may provide education and training on the use of technology in agriculture, such as precision farming, remote sensing, and digital agriculture, which can help to improve agricultural productivity and sustainability.
- 33 **The importance of resilience in the agricultural sector.** The war in Ukraine may also highlight the importance of resilience in the agricultural sector, as farmers and agribusinesses face challenges such as conflict, displacement, and climate change. Agricultural universities may provide education and training on resilience-building strategies, such as diversification of crops and income sources, climate-smart agriculture, and risk management.
- 34 Importance of local knowledge: The war in Ukraine may also highlight the importance of local knowledge in agricultural education and research, particularly in conflict-affected areas where local communities may have unique perspectives and experiences. Agricultural universities may need to work to ensure that their education and research are informed by local knowledge and that they engage with local communities in a meaningful way.
- 35 The war in Ukraine may also highlight the importance of collaboration in the agricultural sector, particularly between different stakeholders such as farmers, agribusinesses, policymakers, and researchers. Agricultural universities may need to work to foster collaboration and to promote dialogue and understanding between different groups.
- 36 The war in Ukraine may also highlight the importance of leadership in the agricultural sector, particularly in times of crisis and uncertainty. Agricultural universities may provide education and training on leadership skills, such as communication, problem-solving, and decision-making, which can help to build strong and effective leaders in the agricultural sector.
- 37 In conclusion, the war in Ukraine can have wide-ranging impacts on studying at an agricultural university, highlighting the importance of technology, resilience, local knowledge, collaboration, and leadership. Despite the challenges posed by the conflict, agricultural universities can provide unique opportunities for students to learn about the intersection of agriculture and conflict, and to contribute to the recovery of the region through their education and research.
- 38 **The importance of sustainable development in the agricultural sector.** The war in Ukraine may also highlight the importance of sustainable development in the agricultural sector, as conflicts can often lead to environmental degradation and unsustainable use of natural resources. Agricultural universities may provide education and training on sustainable agricultural practices, such as agroforestry, conservation

agriculture, and organic farming, which can help to promote long-term sustainability and resilience in the agricultural sector.

- 39 The war in Ukraine may also highlight the importance of gender equality in the agricultural sector, as conflicts can often disproportionately affect women and girls. Agricultural universities may need to work to ensure that their education and research are gender-sensitive and that they promote the inclusion of women and girls in the agricultural sector.
- 40 The war in Ukraine may also highlight the importance of economic development in the agricultural sector, as conflicts can often lead to economic instability and poverty. Agricultural universities may need to work with policymakers and other stakeholders to promote economic development in the agricultural sector, such as through the development of value chains, entrepreneurship, and access to finance.
- 41 The war in Ukraine may also highlight the importance of food security in the agricultural sector, as conflicts can often disrupt food systems and lead to food insecurity. Agricultural universities may need to work to promote food security through education and research on topics such as food systems, nutrition, and food policy.
- 42 The war in Ukraine may also highlight the importance of international cooperation in the agricultural sector, particularly in addressing global challenges such as climate change and food security. Agricultural universities may need to work with international organizations and other stakeholders to promote international cooperation and to share knowledge and best practices.
- 43 In summary, the war in Ukraine can have significant impacts on studying at an agricultural university, highlighting the importance of sustainable development, gender equality, economic development, food security, and international cooperation. Despite these challenges, agricultural universities can provide unique opportunities for students to learn about the intersection of agriculture and conflict, and to contribute to the recovery of the region through their education and research.
- 44 The war in Ukraine may also have significant impacts on the mental health and well-being of individuals in the agricultural sector, particularly those who have been affected by conflict and displacement. Agricultural universities may need to provide mental health support to their students, faculty, and staff, and to work with local communities to promote mental health and well-being.
- 45 Importance of cultural sensitivity: The war in Ukraine may also highlight the importance of cultural sensitivity in agricultural education and research, particularly in conflict-affected areas where there may be diverse cultural and linguistic backgrounds. Agricultural universities may need to ensure that their education and research are culturally sensitive and that they respect and value diversity. The war in Ukraine may also highlight the importance of community engagement in agricultural education and research, particularly in conflict-affected areas where local communities may have unique needs and perspectives.
- 46 Agricultural universities may need to work to engage with local communities in a meaningful way, to build trust and collaboration, and to ensure that their education and research is relevant and responsive to local needs. The war in Ukraine may also highlight the importance of innovation in the agricultural sector, particularly in addressing challenges such as climate change, food security, and conflict. Agricultural

universities may need to promote innovation through education and research on topics such as agtech, biotechnology, and alternative food systems.

- 47 The war in Ukraine may also highlight the importance of advocacy in the agricultural sector, particularly in promoting the needs and rights of farmers and rural communities affected by conflict. Agricultural universities may need to work to raise awareness and advocate for policy change on issues such as land rights, access to resources, and the protection of rural livelihoods.
- 48 In conclusion, the war in Ukraine can have far-reaching impacts on studying at an agricultural university, highlighting the importance of mental health support, cultural sensitivity, community engagement, innovation, and advocacy. Despite the challenges posed by the conflict, agricultural universities can provide unique opportunities for students to learn about these issues and to contribute to the recovery and development of the region through their education and research.
- 49 **The importance of disaster preparedness in the agricultural sector.** The war in Ukraine may also highlight the importance of disaster preparedness in the agricultural sector, particularly in conflict-affected areas where there may be heightened risk of natural disasters such as floods, landslides, and droughts. Agricultural universities may need to provide education and training on disaster preparedness and resilience, and to work with local communities and organizations to develop disaster response plans.
- 50 The war in Ukraine may also highlight the importance of conflict resolution in the agricultural sector, particularly in areas where conflicts can arise over access to resources such as land and water. Agricultural universities may need to provide education and training on conflict resolution and negotiation, and to work with local communities and organizations to promote peaceful and equitable solutions to conflicts.
- 51 The war in Ukraine may also highlight the importance of technology transfer in the agricultural sector, particularly in conflict-affected areas where there may be limited access to new technologies and innovations. Agricultural universities may need to work to transfer new technologies and innovations to local farmers and communities, and to ensure that they are appropriate and sustainable for local conditions.
- 52 The war in Ukraine may also highlight the importance of research on the intersection of conflict and agriculture, particularly in understanding the impacts of conflict on rural communities and the agricultural sector, and in identifying strategies for recovery and development. Agricultural universities may need to promote research on these topics, and to work with local communities and organizations to ensure that research is relevant and useful for addressing local needs.
- 53 **The importance of interdisciplinary approaches.** The war in Ukraine may also highlight the importance of interdisciplinary approaches to agricultural education and research, particularly in addressing complex challenges such as conflict, climate change, and food security. Agricultural universities may need to work with other disciplines such as environmental science, social sciences, and engineering to develop innovative and effective solutions to these challenges.
- 54 Overall, the war in Ukraine can have significant impacts on studying at an agricultural university, highlighting the importance of disaster preparedness, conflict resolution, technology transfer, research on conflict and agriculture, and interdisciplinary approaches. Agricultural universities can play a key role in promoting sustainable

development, resilience, and recovery in conflict-affected areas through their education and research.

- 55 Importance of sustainable agriculture: The war in Ukraine may also highlight the importance of sustainable agriculture, particularly in areas affected by conflict where there may be increased pressure on natural resources and ecosystems. Agricultural universities may need to promote sustainable agriculture practices that are environmentally sound, socially just, and economically viable, and to work with local communities to ensure that these practices are appropriate and effective for local conditions.
- 56 The war in Ukraine may also highlight the importance of gender equality in the agricultural sector, particularly in addressing the unique challenges faced by women in conflict-affected areas. Agricultural universities may need to promote gender equality through education and research on topics such as women's land rights, access to resources, and participation in decision-making processes.
- 57 The war in Ukraine may also highlight the importance of entrepreneurship in the agricultural sector, particularly in promoting economic development and resilience in conflict-affected areas. Agricultural universities may need to provide education and training on entrepreneurship and business development, and to work with local communities and organizations to support the development of small businesses and cooperatives.
- 58 **The importance of global partnerships.** The war in Ukraine may also highlight the importance of global partnerships in the agricultural sector, particularly in addressing global challenges such as climate change and food security. Agricultural universities may need to work with international partners to promote knowledge exchange and collaboration, and to develop innovative and effective solutions to these challenges.
- 59 The war in Ukraine may also highlight the importance of community resilience in the agricultural sector, particularly in building the capacity of local communities to adapt and respond to changing conditions. Agricultural universities may need to work with local communities to build resilience through education and training on topics such as disaster preparedness, sustainable agriculture, and entrepreneurship.
- 60 In summary, the war in Ukraine can have a range of impacts on studying at an agricultural university, highlighting the importance of sustainable agriculture, gender equality, entrepreneurship, global partnerships, and community resilience. Agricultural universities can play a critical role in promoting recovery and development in conflict-affected areas through their education, research, and community engagement efforts.
- 61 The war in Ukraine can also have a significant impact on the mental health of students and faculty members at agricultural universities, particularly those who have experienced or witnessed violence or displacement. Agricultural universities may need to prioritize mental health support for their community members, including access to counseling services and other mental health resources.
- 62 The war in Ukraine may also highlight the importance of cultural sensitivity in the agricultural sector, particularly in areas with diverse populations and cultural traditions. Agricultural universities may need to promote education and awareness on cultural sensitivity, and to work with local communities to ensure that their programs and services are respectful and inclusive of diverse perspectives and practices.

- 63 The war in Ukraine may also highlight the importance of food security, particularly in areas affected by conflict where there may be limited access to food and other basic necessities. Agricultural universities may need to work with local communities to promote food security through sustainable agriculture practices, access to resources, and support for small businesses and cooperatives.
- 64 Importance of communication and information sharing: The war in Ukraine may also highlight the importance of communication and information sharing in the agricultural sector, particularly in promoting transparency, accountability, and community participation. Agricultural universities may need to work with local organizations and communities to develop effective communication strategies that promote information sharing and community participation in decision-making processes.
- 65 The war in Ukraine may also highlight the importance of advocacy in the agricultural sector, particularly in promoting the rights and needs of rural communities and small-scale farmers. Agricultural universities may need to engage in advocacy efforts at the local, national, and international levels to promote policies and programs that support sustainable agriculture, food security, and community resilience.
- 66 In conclusion, the war in Ukraine can have a range of impacts on studying at an agricultural university, highlighting the importance of mental health support, cultural sensitivity, food security, communication and information sharing, and advocacy. Agricultural universities can play a key role in promoting sustainable development and resilience in conflict-affected areas through their education, research, and community engagement efforts, and by working with local communities and organizations to address their unique needs and challenges.
- 67 **The importance of technology and innovation.** The war in Ukraine may also highlight the importance of technology and innovation in the agricultural sector, particularly in promoting sustainable agriculture practices and increasing productivity. Agricultural universities may need to focus on educating students on the latest technologies and innovations in the field, and to conduct research on new and improved practices that can help farmers increase yields and reduce their environmental impact.
- 68 The war in Ukraine may also highlight the importance of disaster preparedness in the agricultural sector, particularly in areas prone to natural disasters or conflict. Agricultural universities may need to work with local communities to develop disaster preparedness plans, including strategies for protecting crops and livestock, and for ensuring access to food and other basic necessities in times of crisis.
- 69 The war in Ukraine may also highlight the importance of environmental conservation in the agricultural sector, particularly in protecting natural resources and ecosystems that are critical for sustainable agriculture. Agricultural universities may need to prioritize education and research on environmental conservation practices, such as soil and water conservation, and to work with local communities to promote these practices in their farming and land-use practices.
- 70 The war in Ukraine may also highlight the importance of land use planning in the agricultural sector, particularly in ensuring sustainable and equitable access to land and resources. Agricultural universities may need to work with local communities and organizations to develop land use plans that take into account the needs and interests

of all stakeholders, including small-scale farmers, rural communities, and indigenous peoples.

- 71 The war in Ukraine may also highlight the importance of social justice in the agricultural sector, particularly in addressing issues of inequality and marginalization. Agricultural universities may need to prioritize education and research on topics such as social justice, land rights, and indigenous knowledge systems, and to work with local communities and organizations to promote more equitable and just policies and practices in the agricultural sector.
- 72 In summary, the war in Ukraine can have a range of impacts on studying at an agricultural university, highlighting the importance of technology and innovation, disaster preparedness, environmental conservation, land use planning, and social justice. Agricultural universities can play a critical role in promoting sustainable development and resilience in conflict-affected areas through their education, research, and community engagement efforts, and by working with local communities and organizations to address their unique needs and challenges.
- 73 Importance of gender equality: The war in Ukraine may also highlight the importance of gender equality in the agricultural sector, particularly in addressing the unequal access to resources and opportunities faced by women farmers. Agricultural universities may need to prioritize education and research on gender equality issues in agriculture, and to work with local communities and organizations to promote more equitable and inclusive policies and practices.
- 74 Importance of youth engagement: The war in Ukraine may also highlight the importance of youth engagement in the agricultural sector, particularly in building sustainable and resilient communities. Agricultural universities may need to focus on engaging and educating young people on agriculture and rural development issues, and to work with local communities and organizations to create opportunities for youth to participate in decision-making and community development activities.
- 75 **The importance of partnerships in the agricultural sector.** The war in Ukraine may also highlight the importance of partnerships in the agricultural sector, particularly in promoting sustainable development and community resilience. Agricultural universities may need to work with local governments, NGOs, and other organizations to develop effective partnerships that support sustainable agriculture, food security, and community development initiatives.
- 76 The war in Ukraine may also highlight the importance of entrepreneurship in the agricultural sector, particularly in promoting economic development and community resilience. Agricultural universities may need to focus on educating and supporting students on entrepreneurship and business development skills, and to work with local communities and organizations to create opportunities for small-scale farmers and rural entrepreneurs. The war in Ukraine may also highlight the importance of adaptive management in the agricultural sector, particularly in addressing the complex and dynamic challenges facing rural communities in conflict-affected areas. Agricultural universities may need to prioritize education and research on adaptive management strategies that promote resilience, flexibility, and innovation in the face of changing circumstances.

Conclusion

- 77 In conclusion, the war in Ukraine can have a range of impacts on studying at an agricultural university, highlighting the importance of gender equality, youth engagement, partnerships, entrepreneurship, and adaptive management. Agricultural universities can play a key role in promoting sustainable development and resilience in conflict-affected areas through their education, research, and community engagement efforts, and by working with local communities and organizations to address their unique needs and challenges.
- 78 From the literature viewed, it can be concluded that the war in Ukraine has had a significant impact on the results of studies at agrarian universities. The war has resulted in a disruption of the agricultural sector, with negative consequences for agricultural education and research. The conflict has led to a reduction in funding for research and development, as well as a decline in the availability of modern technologies and equipment. The war has also had a significant impact on the labour market, resulting in brain drain and a shortage of skilled personnel in the agricultural sector.
- 79 However, despite the challenges posed by the war, there have also been opportunities for growth and development in the agricultural sector, with a focus on innovation, sustainable development, and social responsibility. The literature highlights the need for increased government support and investment in the agricultural sector to overcome the challenges posed by the war and to ensure the continued growth and success of agricultural education and research in Ukraine.

ABSTRACTS

Students studying at agricultural universities in Ukraine during the war have faced a range of challenges. It is important to explore the impact of the war in Ukraine on the results of studies at an agricultural university, and to identify the strategies for promoting sustainable development and resilience in conflict-affected areas. The war in Ukraine can have various impacts on studying at an agricultural university, depending on the location of the university and the extent of the war in the region

Pendant la guerre en Ukraine, les étudiants des universités agricoles ont dû faire face à de nombreux défis. L'impact de la guerre en Ukraine sur les études dans une université agricole peut varier en fonction de l'emplacement de l'université et de l'étendue du conflit dans la région. Cet article examine l'impact de la guerre en Ukraine sur les résultats des études dans une université agricole et analyse les stratégies visant à promouvoir le développement durable et la résilience dans les zones touchées par le conflit.
